During a wildfire, smoke can make the outdoor air unhealthy to breathe. Local officials may advise you to stay indoors during a smoke event associated with a wildfire. While sheltering, some outdoor smoke can enter your home and affect your indoor air quality. Explore these resources to learn what steps you can take to protect your family from wildfire smoke indoors.

Scan the QR Codes below to access each resource, or scan the code to the right to explore EPA’s Wildfires and Indoor Air Quality webpage, which is available in nine languages.

**‘How to Create a Clean Room at Home’ Video**

Spending time in a clean room at home can help reduce your exposure to smoke while staying indoors. This video will show you how to create a clean room to reduce your family’s exposure to wildfire smoke while indoors.

**DIY Air Cleaner Infographics**

If portable air cleaners are not available or affordable, you may choose to use a do-it-yourself (DIY) air cleaner. These infographics provide directions for how to create different types of DIY air cleaners.

**Wildfire Guide Factsheets**

This series of factsheets from EPA’s AirNow program will help you prepare for wildfire season and take steps to reduce your exposure to smoke and ash.

**Wildfires and Indoor Air Quality in Schools and Commercial Buildings Webpage**

Smoke events can last for days and weeks, which is why it is important for building owners and managers to have information on best practices for reducing exposure to smoke that may enter schools, commercial buildings, or multi-unit housing.
